

Onapsis Assess

Vulnerability Management for Business-Critical Applications

Eliminate the Cybersecurity Blind Spot Around Your Most Important Assets

The Challenge

Business Applications Have Never Been More Vulnerable

The increasing complexity and size of application environments, heavy customization of individual apps, and growing backlogs of patches have left organizations with a longer list and greater variety of vulnerabilities to identify, understand, and act on. The exposure and risk of exploitation at the application layer is also greater now due to digital transformation initiatives, with many critical applications moving to the cloud, connecting to third-parties, or becoming publicly accessible.

This combination of more vulnerabilities and more exposure means organizations need strong vulnerability management programs around their business-critical applications. However, traditional vulnerability management tools don't sufficiently support these environments. This forces teams to rely on manual efforts – which inevitably leads to unaddressed risk and open attack vectors in their most important assets.

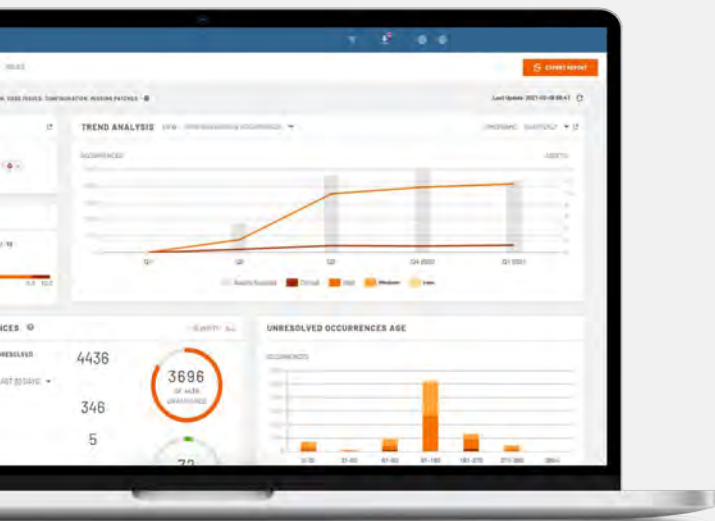

64%

of ERP systems have been breached in the last 24 months¹

3 hours

The Solution

Protect the Application Layer Itself with Onapsis Assess

Powered by research and insights from the Onapsis Research Labs, Assess uniquely provides the visibility and context both InfoSec and IT teams need to quickly act on vulnerabilities that pose the greatest risk to the business.

- Identify vulnerabilities at the application layer
- Understand risk and business impact
- Facilitate remediation with technical solutions
- Accurately report on risk

Identify and Understand Risk

Automatically Identify

Find vulnerabilities due to missing patches, misconfigurations, user settings, and custom code

Easily Scale Your Approach

Range of assessments take you from securing the baseline to more advanced vulnerability use cases

Understand Business Impact

Make empowered decisions about risks – those to accept and those that need action

We save 20 hours of investigation time each week

– Large Retail Company

We reduced remediation time by 83%

– F500 Bio-Pharmaceutical Company

Greater Risk Reduction, Less Effort

Prioritize Remediation Efforts

Understand where to focus efforts and don't waste time on issues that don't pose a big risk

Fix Issues Faster

Arm IT partners with step-by-step technical solutions to make resolutions straightforward

Align InfoSec and IT Teams

Provide cross-functional visibility with built-in workflows and ServiceNow integration

Accurately Report on Risk and Measure Success

Gain Real-Time Visibility

Easily report on the current security posture, communicate risk in real business terms

Get the Latest Threat Intel

Keep up with the latest security best practices from Onapsis Research Labs

Create Reports and Dashboards

Save time preparing metrics and showcase progress in reducing risk

We save 40 hours of manual data pulls and communication each week

– Multinational Chemical Company
