

Onapsis Assess Baseline

Jumpstart Your SAP Application Security

Accelerate Your SAP Vulnerability Management with Focus and Prioritization

In a world where business-critical SAP applications are under attack every day, organizations struggle with addressing this risk. Complex, interconnected landscapes of production and non-production systems paired with under-resourced teams means it's a challenge to simply know what to tackle first when it comes to vulnerability management for SAP. There's a growing backlog of critical patches as new vulnerabilities and threats are regularly discovered, and traditional vulnerability management solutions fail to paint an accurate picture of the true risk to SAP applications.

But vulnerability management for SAP doesn't have to be hard if you have the right partner. Onapsis Assess Baseline gives organizations just what they need to kickstart their SAP vulnerability management processes and easily align with the officially published SAP Security Baseline.
